Subject: cards for cancer event

In addition to the ones you have, will need additional cards for Julie Gerberding (CDC Director) and Harold Freeman (Member of President's Advisory Board on Cancer). Jack Valenti will be in audience, so maybe just a reserved seat and a reserved seat for William Skowronski, parent of Matthew Skowronski, one of our stage participants. Our leukemia society kids and their parent will need to be put in one section as well.

Subject: REMARKS BY THE PRESIDENT ON CANCER WITH LANCE ARMSTRONG

THE WHITE HOUSE

Office of the Press Secretary

For Immediate Release
September 18, 2002

REMARKS BY THE PRESIDENT
ON CANCER WITH LANCE ARMSTRONG

The East Room

11:15 A.M. EDT

THE PRESIDENT: Thank you for coming.
Please be seated.
Gosh, thanks for the warm welcome.
Welcome to the White House. I'm glad
you're here.

The fight against cancer has seen
major victories, and is on the verge of
major breakthroughs. It's important for
Americans to understand that. Medical
science is helping cancer victims survive,
and helping survivors lead better lives.
With exercise, nutrition, and changed
behavior, we can reduce the chances of
developing cancer. With well-funded
research, we are pushing toward new cancer
therapies and new cancer cures. The
commitment of this nation is clear: We

will win the fight against cancer.
(Applause.)

I appreciate our Secretary of Health and Human Services, Tommy Thompson, for being here and being on the leading edge of this fight. He is a general in the war against cancer. (Applause.) I want to thank our Secretary of Agriculture, Ann Veneman, who is with us today. Thank you for coming, Annie. (Applause.)

I appreciate the members of the United States Congress who are here today. Two fine Senators, Senators Gregg and Brownback, of New Hampshire and Kansas, respectively; thank you all for coming. (Applause.) Three members from the House of Representatives: Deborah Pryce, Roger Wicker, and Sue Myrick -- we're honored you all are here. Thanks for coming. (Applause.)

I'm honored that Andy von Eschenbach is here, who is the Director of the National Cancer Institute. Andy, thanks for coming. (Applause.) My fellow Texan. (Laughter.) I appreciate the Director of the National Institutes of Health, Elias Zerhouni, is here. Elias, thanks for coming. (Applause.)

The Surgeon General is here, Rich Carmona. Rich, I appreciate you being here. (Applause.) Julie Gerberding, who is the Director of the Centers for Disease Control is with us, as well. (Applause.)

I'm honored to be on the stage with some courageous Americans, survivors of cancer -- Paige Brown, Trischa Goldman, Jamal Rasheed, Cynthia Rubin, Matthew Skowronski, and, of course, Lance Armstrong. Thank you all for coming. (Applause.)

Our progress against cancer is dramatic, and it's improving. We know that focused and sustained efforts can

make a huge difference, because we have seen survival rates rise. Lance Armstrong's inspiring career is striking proof that testicular cancer survivors can go on to lead extraordinary lives. Thanks to the advances in science, five-year survival rates for testicular cancer have reached an amazing 95 percent. That's progress. (Applause.)

Overall, more than 60 percent of the Americans diagnosed with cancer today can expect to be alive in five years. (Applause.) The survival rate for children after 10 years is approaching 70 percent. (Applause.) Today, 8.9 million Americans are cancer survivors. And research and new technology offer hope, offer a lot of hope that this number will continue to grow significantly. Every life, every name, is a triumph of medicine and a triumph of hope.

Given the statistics, the good news about cancer survivors also presents a real challenge to our country. Cancer survivors need high-quality follow-up care to detect early signs of recurrence and to treat other problems that come from the illness and its treatment. For example, many childhood cancer survivors do not receive any follow-up care after being treated and cured. Because cancer treatments can harm growing tissues, children are particularly vulnerable to recurrences and complications.

The National Cancer Institute, under Andy's lead, is committed to improving the long-term care for all survivors of cancer, and especially for our children. (Applause.) NCI-funded scientists are exploring new ways to enhance high-quality, follow-up care.

We must also accelerate our progress against cancer itself. Despite all our gains, the disease continues to take a terrible toll on our country. Despite all the progress, there are some startling

statistics that break my heart. More than 1,500 Americans die from cancer every day. Three out of every four American families will have at least one family member diagnosed with cancer. Scientists, health care providers and public health professionals are working tirelessly to find cures for this disease, and they need our full -- full support.

My 2003 budget would increase funding for cancer research by \$629 million, for a total investment in cancer research throughout the National Institutes of Health of more than \$5 billion.

(Applause.) In order to win the war against cancer, we must fund the war against cancer. (Applause.) And I appreciate the members of Congress here, who are committed to making sure this budget gets -- gets enacted, soon. (Laughter.)

Prevention is critical. And we're just beginning to make progress on cancer prevention. There are smart choices all Americans can make to reduce our chances of disease, choices we're promoting in our HealthierUS initiative. Even modest improvements in diet, in fitness and behavior can help prevent many serious health problems, including cancer.

There's a growing body of evidence that a diet rich in fruits and vegetables reduces the risk of cancer and other chronic diseases. In fact, it's been estimated that dietary changes could reduce cancer deaths in the United States by a third. I'm going to start eating broccoli. (Laughter and applause.) I want to be a part of the third. (Laughter.)

Regular exercise is another way to prevent illness and add years to your life. Last June, I signed an executive order directing federal agencies to work together to develop new policies to promote fitness. I reconstituted the

President's Council on Physical Fitness and Sports. I named Lynn Swann to head the Council. Exercise is a really important part of my life. And I urge all Americans to make it an important part of your life, as well.

Of course, when it comes to behavior, there are healthy choices we can all make -- like, don't smoke -- in addition to a nutritious diet, regular exercise and smart choices. Preventative health screenings can also help save lives. They can detect many forms of cancer at earlier, less dangerous stages, allowing doctors to defeat a cancer before it spreads.

Last month, Secretary of Agriculture Ann Veneman learned that she has breast cancer. This is one of the hardest things a woman can hear from her doctor, and one of the toughest challenges any family will face, including the White House family. Fortunately, Secretary Veneman's cancer was diagnosed at a very early and curable stage. The good news is her doctors expect her to enjoy a full recovery. (Applause.)

I checked with her in the Oval Office before coming over here, just to make sure she's going to show up for work. (Laughter.) The good news for me is she is going to carry out her responsibilities during her treatment. I appreciate her courage, I'm really proud of her. Our prayers are with her. I'm proud of the example she sets. She is -- I knew I picked an extraordinary person when I named her to run the Secretary of Agriculture. I didn't realize I was going to pick an heroic figure, as well, an example for many people, to understand the need to -- the need to get a mammogram; the need to take care of yourself; the need to screen early; the need to understand that we can stop cancer in its tracks if we all take wise moves. And so, Ann, thank you for your example.

I've tried to do the same thing myself. Earlier this year, to detect whether or not I could be infected with colorectal cancer, I had a screening. Turns out everything the President does is in the public view. (Laughter and applause.)

Screenings can save lives, and that's important. None of us are immune. All of us can be wise about how we take advantage of technologies. I want not only to make Americans aware of screenings, but scientists are now actively investigating new ways to make screenings better, so we can detect cancer earlier.

For example, again Andy's outfit, the National Cancer Institute, is launching a new clinical trial to study the most effective ways to detect lung cancer. Scientists have also developed promising new tests that analyses a single drop of blood to detect ovarian cancer in its earliest stages, even before symptoms develop. Many women are diagnosed with ovarian cancer too later, because the symptoms can easily be mistaken for other conditions. This new discovery brings great hope, great hope, for overcoming this disease.

There are still many high medical hurdles that we're going to have to clear here in America. But for the first time in human history, we can say with certainty, the war on cancer is winnable. (Applause.) And this nation will not quit until our victory is complete.

And now it's my pleasure to introduce a man who doesn't know the meaning of the word, quit. Just a few years ago, he was diagnosed with cancer. He was weakened by chemotherapy treatments and told he had a 50-50 chance of surviving. But he's done more than survive. As anybody who knows anything about sports knows, he's triumphed. His story, from cancer

diagnosis to his fourth straight victory in the Tour de France is one of the great human dramas in sports history.

And today -- he asked me not to say it, so I'm going to say it anyway -- (laughter) -- is his 31st birthday. (Applause.) And now, it's my honor to present to you a son of Texas, a great American, a wonderful champ, Lance Armstrong. (Applause.)

LANCE ARMSTRONG: Actually, Mr. President, you joked to me that you were going to say that, and I said, don't say that. And you said, I'm going to say it. And I said, well, all right, you're the President, you can say whatever you want to say. (Laughter.) So I knew you were going to say that. (Laughter.)

And nobody likes to really recognize their birthday, so -- and, in fact, I think it's very meaningful why, to me, birthdays don't really matter much anymore. Not only do you get embarrassed that they sing "Happy Birthday" in a restaurant, but, for me, I sort of have a new birthday, and that's October 2nd, the day I was diagnosed, and the day that we all sort of look to and mark these milestones by -- one year, two year, five year, ten year -- hopefully, I'll have a 50 year, I don't know. But that is sort of my new birthday. So we can have another one of these on October 2nd -- (laughter.) That would really be special.

This is such a great honor to be here with the President, with my fellow cancer survivors. This is a big fight, and like anything in life, I think we have priorities. And when I wake up in the day, I have a few priorities -- I've got to ride my bike, I've got to kiss my kids, I've got to eat a little bit, maybe get a massage -- and try to win the Tour de France. (Laughter.) Not every day, but work towards that. (Laughter.)

And, Mr. President, I think -- actually, I don't think, I know that you have priorities -- homeland security, the economy, domestic issues. But this fight has got to be one of our biggest priorities. If you look at the numbers -- and you told us the numbers, and they were exactly right -- we see a tragedy like 9/11 is every two days of this illness. That doesn't have to happen. We need more people -- we need more survivors up here. Maybe they'll build us a bigger stage, I don't know. But it's a big, big problem.

And it's an old problem, and people have sort of gotten used to it. And let's make it a priority again. Let's put it out there. Let's fix the problem.

So, thank you for having me. Thank you for having my fellow -- as I said yesterday, my constituents, my family members here, my fellow cancer survivors. And it's just a tremendous honor. Thank you.

THE PRESIDENT: Appreciate you, Lance. (Applause.)

Again, thank you all for coming. We'll all be celebrating Lance's birthday in the State Dining Room here at the end of the hall. He made a little cake for you. He looks forward to you singing "Happy Birthday" to him. (Laughter.)

In the meantime, many in this room are involved in this war. I want to thank you for your efforts, thank you for your love for your fellow Americans. May God bless you all, and may God bless America. Thank you. (Applause.)

REMARKS ON CANCER

Wednesday, September 18, 2002

East Room

11:15 – 11:45 AM

Margaret Spellings / Karl Rove

I. PURPOSE

To enable you to highlight your Administration's commitment to improving the federal effort to fight cancer, and to raise public awareness of the need for preventive cancer screenings as outlined in your HealthierUS agenda.

II. BACKGROUND

You have committed to fight cancer through a comprehensive agenda that improves the prevention, diagnosis, and treatment of the disease. Your 2003 budget increases funding for the National Cancer Institute by \$913 million for a total \$5.5 billion investment in cancer research at the NCI and throughout the National Institutes of Health (NIH). Through increased collaboration with other federal agencies and the private sector, the NIH is speeding the translation of research breakthroughs into new therapies for patients.

Scientific evidence shows that the chances of surviving and recovering from cancer are improved if the disease is detected early. There is also growing evidence that improvements in physical activity, nutrition and personal behavior can reduce the incidence of cancer in America. In fact, this summer you challenged Americans to take better care of themselves in your HealthierUS initiative, and highlighted measures individuals could take to prevent or delay poor health, including diseases such as cancer.

In May of this year, you appointed Lance Armstrong to the President's Cancer Panel, a three-member group that advises the Administration on progress in the war against cancer. Mr. Armstrong has formed a non-profit organization called the Lance Armstrong Foundation to promote cancer survivorship, the concept of making treatments less severe or invasive and improving the quality of life for cancer survivors. Specifically, the Foundation is advocating for recently introduced legislation to address survivorship. While some problematic provisions in the legislation prevent you from endorsing it, you do support the concept of survivorship and the Administration is currently funding survivorship research programs.

The audience for your remarks consists of leading members of the cancer research and advocacy community, as well as a group of cancer survivors.

III. PARTICIPANTS

Onstage

Paige Brown - Chronic myelogenous leukemia survivor in her early 30s. She produces a news program in Tennessee called "Talk of the Town" and serves as a national spokesperson to raise awareness and inspire others with her disease.

Patricia A. Goldman – Retired airline executive and former government appointee, she currently serves as the President of the Ovarian Cancer National Alliance, an educational and advocacy organization based in Washington, D.C., that unites ovarian cancer survivors, advocates and healthcare professionals in the fight to overcome ovarian cancer. Patricia was diagnosed with ovarian cancer in 1993.

Jamal Rasheed – 48-year-old prostate cancer survivor from Dallas. Serves as a health education consultant to the Dallas Public School system and teaches children about physical fitness and drug and alcohol awareness. Mr. Rasheed founded the Alternative Education Athletic Association of Texas - giving at-risk inner-city children a safe place to learn and play sports.

Cynthia Rubin - Diagnosed at the age of 36 with Stage III breast cancer, Cynthia serves as President of the Young Survival Coalition. She is featured in the Lifetime TV documentary Fighting for Our Future, about young women and breast cancer that will air on October 10, 2002, as well as a companion book. She is a partner at Flemming, Zulack & Williamson, LLP in New York City specializing in Family and Matrimonial Law.

Matthew Skowronski – 13-year-old acute lymphoblastic leukemia survivor from Purcellville, Virginia. Matt is an active participant in the Leukemia and Lymphoma Society's Team In Training program, which helps to raise money for leukemia and lymphoma research.

VIPs In Audience

Secretary Tommy Thompson

Dr. Andrew von Eschenbach, Director, National Cancer Institute

Dr. Elias Zerhouni, Director, National Institutes of Health

Dr. Richard Carmona, Surgeon General

Josephine:

Thank you again so much for including our group in the Lance Armstrong White House event. It will mean so much to our patients/survivors who are able to go! We have included a great group of kids who represent a great cross section of those affected by these diseases. Please let me know if you need any further information. I will also send in a separate email the information about our programs, particularly Team in Training which does century bike rides.

Give Jeanie a hug for me. Thanks again!

Sincerely,

Beth Rather

Subject: Lance Armstrong Vehicle Info

NW gate
Sept. 18 10:30 a.m.

Here's info on the vehicle, driver and passenger. One question - if they are going in through NW Gate, should we tell them to go to 15th and Pennsylvania gate or 17th and Pennsylvania?

2001 Black Lincoln Towncar

(b)(6)

Passengers

Lance Armstrong

(b)(6)

E. Lee Walker

(b)(6)

Jeffery C. Garvey
